Art of Security

It is vital for us to create **trustworthy access solutions** that provide seamless and safe visitor passage. That offers a **serene and pleasant visitor experience through captivating and user-friendly product design**. And that guarantees that the property and assets will always be protected. For us, that is the **Art of Security**.

No matter the nature of the customer's requirements, we make every effort to understand what matters to him so that **we can offer customized solutions that complement the environments they are protecting**.

Secured by COMINFO

We ensure that our products blend in harmoniously with the overall architectural picture of the entrance area and efficiently streamline the flow of people within a customer's property. You can find COMINFO solutions in these buildings.

Variety in Product Design

Our product **portfolio comprises 20 speed gate models** for secure and smart access to corporate offices, airports, government institutions, and bicycle parking, to name a few.

All the speed gates **differ in terms of technical specifics, security level, application area, and, more importantly, product design.** This variety enables us to offer a speed gate that perfectly fits any installation.

*Comparison among swing speed gates.

Variety in Product Design

Apart from the possibility of choosing between speed gates with **round & squared front shapes** and **ultra-slim & standard widths**, the customer can opt for **glass & stainless steel side panels**, different cabinet footprints, and other options.

Other Options

Wall sensors

Fixed glass barriers

Variable Passage Width and Height

We are making no compromises when it comes to safety, security, and user-friendliness. COMINFO speed gates are available with **extended barrier-free passages for wheelchair users**, the transport of material, and any other requirements. In selected models, even an Extra wide passage of 1 500 mm is available. Moreover, **one wing or two wings passage** is also possible.

For a **greater level of security**, optional glass barriers with an upper edge height of 1 800 mm* and even 2 200 mm* are available.

* This may vary according to the selected speed gate model.

** The renderings above depict a model installation of EasyGate L.C.

Sustainable Operation

One of our long-term corporate goals is **to minimize the environmental footprint of our operations.**

COMINFO products have a **significantly lower electricity consumption than is standard** on the market. Furthermore, **we cooperate mainly with local suppliers** and reduce consumption on the company premises in a targeted manner.

Reducing the Ecological Footprint

Electricity Consumption

Our speed gates feature the **lowest power consumption in a standby mode** in the market, specifically 6,1 W in selected models.

Supply Chain Regionalisation

We **cooperate mainly with local suppliers.** Almost 85 % of them come from the Czech Republic. Of our ten largest suppliers, eight are domestic.

Waste Management

By adapting the manufacturing processes and product design of our speed gates, **up to 99 % of the materials used are recyclable.**

Utilizing Renewable Resources

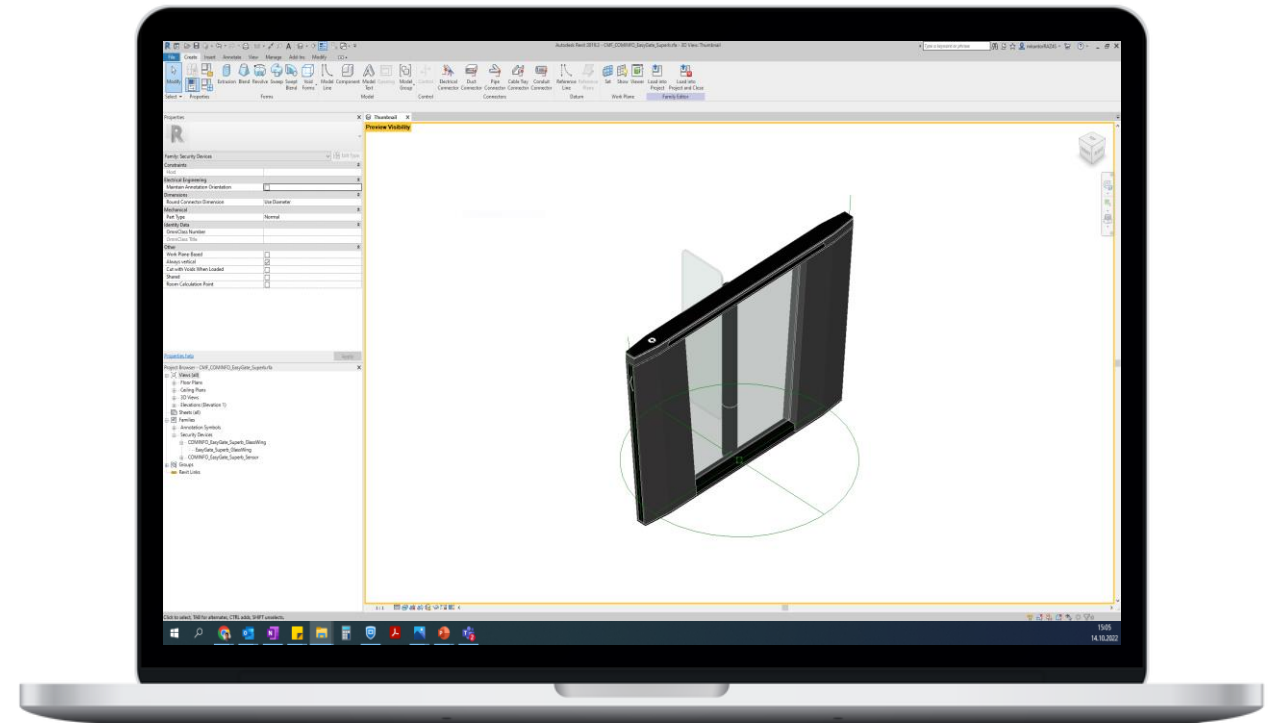

Our production plant will be shortly equipped with **solar panels generating a significant percentage of our electricity consumption.**

BIM – Building Information Modeling

BIM, or Building Information Modeling, is a **complex design and construction process** that utilizes software and a collaborative design process to make the procedure of **developing buildings more efficient**.

Using BIM objects provides construction, design, and architecture professionals with **better decision-making, reduced workload, and cost savings** on their projects.

The BIM objects in the Revit file type (Autodesk Revit) for the COMINFO products are **available via our [company websites](#)**.

Visualize your Project with Augmented Reality

Our Augmented Reality (AR) application, the **turnstileART** app, allows users to **easily create professional 3D renderings of COMINFO speed gates** in a real environment or on a white background.

You can instantly see and compare different speed gate models, **simplifying your project preparation and making it easier to decide which model to choose**. The Snapshot function allows you to **share designs** with colleagues or clients.

The app is available via [Google Play](#) and [App Store](#).

Facilitating the Smart Building Operations

Contemporary buildings are serviced by a **wide range of subsystems, including general security and one of its components, entrance security**, all of which facilitate the building operations.

The smart building concept builds on the **interconnectability of the building's components and facilitates its operations** through energy efficiency, increased responsiveness, automatization, and other characteristics.

The COMINFO products leverage their **advanced electronics and software solutions to be seamlessly integrated into the advanced system of operations** in smart buildings.

Advanced Electronics

In-house-built electronics enable the **swift process of large-capacity information**. It allows advanced performance **monitoring, reporting, alerting, and diagnostics**.

Open Software Architecture

COMINFO communication interface allows for **seamless integration into existing building systems, i.e.,** visitor management software and lift control system – **supporting overall building management**.

Technology Integration

Our portfolio features an option to **ingeniously integrate a number of in-house and 3rd party technologies** into standard-sized cabinets, alternatively through an external bracket in the chassis of selected models.

Full Customization | Agora Tower

Project	Agora Tower
Architectural studio	Make Architects
Place of installation	Budapest, HU
Speed gate model	EasyGate SPD
Customization	Special black gray matt coating by Axalta Integration of Kone lift control system Agora Tower logo on glass wings Integration of a post with a biometric camera Edge lights, Access lights and Wing lights

The speed gates in the Agora office center are a materialization of project customization at a scale.

Cooperation with several stakeholders on the customer's side resulted in speed gates with a unique design and a wide range of identification options.

The speed gate covers were painted with Axalta special coating at the designer's request. This blends well with the black glass top panel and the contrasting white lighting on the top edge of the speed gate.

The wings of the speed gates were also illuminated, on which we engraved the Agora logo. Visitor navigation is further facilitated by the Access light and a backlit arrow pointing to the speed gate lane that visitors or employees should use.

Speed gate lanes are equipped with RFID and QR code readers and an integrated lift call system from Kone. Selected speed gate lanes were mounted with a post with a camera for biometric identification.

Based on the client's request, we've made construction changes in the cabinet frames, so they are prepared for a possible extension of biometric identification.

Standard Surface Finishes

Standard Surface Finishes

Our speed gates come in a **brushed stainless steel finish as standard**. If you want a speed gate in a different color, we can offer **powder coating in any color from the RAL color chart**.

With the option to choose the color, you can nicely **match the speed gates with the rest of the entrance lobby or reception**. We will be happy to deliver them in **your company colors**.

Brushed stainless steel

Powder coating | RAL color chart

EasyGate SG
The Lincoln, Manchester – UK

Powder Coating | RAL Color Chart

We have taken **maximum care** to work with suppliers providing the highest **quality powder coating**, such as Dulux and Tiger.

You can choose from the **standard range** from the RAL color chart consisting of **6 colors** or the **premium range** encompassing all the remaining RAL colors.

The option is also to choose **Special coating finishes** that enable speed gates to stylishly blend in with the interior environment and live up to the architect's vision.

*Customized Design / Special Finishes / **Special Coatings***

Standard Range

	White Matt		Black Matt		Anthracite
	Aluminium		Bronze		Café Crème

Premium Range

Except the Standard range selection any color from the RAL chart can be chosen.

Modularity in the Coating

The speed gate product design enables the customer to **apply the selected coatings to different construction parts** of the cabinet*.

This modularity allows companies to **accent their corporate colors and elevates the entrance area** design as a whole.

Special Finishes

Special Finishes

Special treatment of the **stainless steel surface, alternative metal finishes, and special coatings** are available upon request.

Speed gates can be plated with patinated brass and steel, copper bronze, or, alternatively, black stainless steel. The **choice of metal finish is nearly unlimited**.

We can also **apply special coating outside the standard RAL range** by working with world-renowned paint suppliers.

Patinated brass | The Flow Building

Project	The Flow Building
Architectural studio	Chapman Taylor
Place of instalation	Prague, CZ
Speed gate model	EasyGate LC
Customization	Special patinated brass and steel cabinets Integration of Schindler lift control system Lane lights, Access lights and Wing lights

Patinated brass and steel were selected as the materials for the speed gate cabinets based on the investor's and architects' requirements.

The patinated brass-steel combination creates a pleasant contrast of colors, while the speed gates resonate well with the surrounding space.

The patina used on these two materials is only recognizable when viewed up close, and this effect alone is both a **captivating and astonishing sight to behold**.

We also came up with a solution for the increasingly popular requirement of installing a **system that automatically calls lifts**. Additionally, the front panels of the speed gates were **equipped with Lane lights display** featuring an arrow that will direct people through.

Special Cladding

Special Cladding

Our speed gates can be clad in **Corian**, **natural stone**, and **wood**.

Corian is solid and highly durable; it is **warm and pleasant to touch**. There are no visible joints on the surface.

The **stone cladding** is different in structure, grain, and surface finish. Thanks to that, it **creates an extraordinary visual effect**.

Wood offers a wide range of color shades and reliefs. Wood cladding gives the speed gates a **noble look and makes the space cozier and optically warmer**.

Customization	Natural Stone Cladding Integration of Schindler lift control system Access lights

The reception and public space at the front of the building are decorated with a **large-scale work of art carved into sandstone**, while the floors and panelling of the reception are also made of stone.

The architects, therefore, strived to ensure that the speed gates at the entrance also featured stone cladding.

The architects were also tasked with designing the upper sections of the **speed gates**, which were to be made of several narrower strips of stone, so that they would **also correspond in shape to the lining of the adjoining counters**.

Together, the **reception and speed gates form a single artistic element** in the entire space, reminiscent of a group of stone statues.

Branding

Branding

Our speed gates can be customized to perfectly **meet the brand's identity** – the **top lid can be coated in any color** and branded according to corporate guidelines.

You can even **sandblast your logo on the wings** and use it as a **symbol where the contactless card is to be placed** by your employees and customers.

Bespoke Design

55 COLMORE
ROW

Bespoke Design

We can **adapt the speed gates to any space**, so they fit elegantly into it and do not interfere with its architectural value. For example, the **product design of the speed gate cabinets can be optionally modified** to blend in seamlessly with the overall design of the reception area.

Moreover, **we can install them in the way they form an arc**, i.e., the layout of speed gate lanes is set up in a curved line. Also, speed gates can be installed in a **staggered, in other words, diagonal layout**.

The individual floors of the building, designed in a **neo-futurist style**, are essentially vertically stacked slabs connected by a series of staircases.

It was necessary to design something that was simple yet imaginative, and that would blend in with the surroundings and punctuate the overall artistic expression of the space.

The **architects proposed tilting the speed gates**, which they then placed on black lines on the floor. Thanks to the fact that the **lines and the speed gates are both the same color and width**, they appear to merge into one when viewed from above.

Visual Guidance & Lights

Visual Guidance & Lights

Navigation lights **help visitors or staff walk through the speed gates**. LED arrows on the front of the speed gates **guide visitors to the right passage**.

Illumination of the wings, top panel, and **other guidance technologies facilitate orientation while passing through the speed gate**.

The individual light elements can also **indicate the speed gate status** and visually inform, for example, about emergencies. Therefore, performing an essential **safety function**.
